

### Vamp 221 arc protection installed in Petronas' new offshore platform

Petronas Carigali Sdn Bhd of Malaysia has installed a Vamp 221 arc protection system in their new offshore oil-drilling platform. The platform presently being commissioned will operate in the South China Sea close to the coast of Brunei. Arc protection is a natural choice for Petronas because of the company's great concern for safety issues. In the event of an arc fault it will protect the personnel and a 6.6 kV VEl switchgear onboard. Besides minimizing human and material damage, the system will also shorten downtime, thus saving substantial costs.

Petronas Carigali Sdn Bhd is a wholly owned subsidiary of Petronas, an oil and gas company owned by the Malaysian government. Its main activities are to explore, develop and produce oil and gas. Petronas is ranked among the 500 largest corporations in the world. It has four subsidiaries listed on the Malaysian stock exchange and has ventured into more than 33 countries worldwide.
